## TruOps Common Language Store

get industry-standard interconnection quickly and cost effectively

TruOps Common Language® is the industry resource that communications service providers, telecom infrastructure vendors and their business partners rely on for identifying, locating, managing and interconnecting network resources. Recognized by international standards bodies and organizations including ANSI, ATIS, ETSI and IETF, the Common Language suite of products includes code sets, code spreadsheets and more.

Companies typically purchase Common Language subscriptions, which provide access to the full product suite. However, for companies with lesser needs, a limited set of products is available for purchase via the Common Language Store. This option is ideal for resellers, telecom billing and/or processing companies, regional holding companies, content providers and any other type of company that needs an industry-standard method for low-volume interactions with communications service providers.

### How does Common Language benefit your organization?

Communication service providers require their business partners to use Common Language Location (CLLI™) Codes, which identify locations and their functional use.

Examples include switching locations needed to receive North American Numbering Plan (NANP) resources (NPA/NXX codes), or to establish facility or trunking points of interface (POI) locations.

### The Common Language Store provides several codes

#### Common Language Location (CLLI) Codes

These enable a quick, precise exchange of location information to support interconnection. The Common Language Store provides a convenient and cost-effective way for non-licensee companies to order CLLI Codes. This option is ideal for organizations whose growing businesses do not yet require the greater value offered by a CLLI Code Set license.

#### Design Routing Code (DRC)

These are a three-character alphanumeric code that represents the customer device to which a Design Layout Report (DLR) is electronically delivered by the provider as a result of an Access Service Request (ASR) or Local Service Request (LSR) order.

#### Exchange Carrier (EC) Code

These are a two- or four-character alphabetic code that represents the legal entity company name for a company providing communications services as per ANSI ATIS-0300251, Codes for Identification of Service Providers for Information Exchange. An EC typically provides dial tone and local exchange switching of telecommunications services and has at least one wire center. However, other types of companies also receive the code to do business with a trading partner and aid flow-thru processes in receiving an ASR or LSR order.

# TruOps Common Language Store

get industry-standard interconnection quickly and cost-effectively

## Interexchange Access Customer (IAC) Code

Also known in the industry as an ACNA; these are a three-character alphabetic code that represents the legal entity company name for a company requesting communications services as per ANSI ATIS-0300251, Codes for Identification of Service Providers for Information Exchange. An IAC Code typically is a communications or information provider, but other types of companies receive the code to do business with a trading partner and aid flow-thru processes in sending an ASR or LSR order.

## Interexchange Access Customer (ICSC/SC) Code

These are a four-character alphanumeric code that identifies a service provider's service center. This information is required to do business with a trading partner, typically via ASR or LSR processes.

## Manufacturer (MFR) Code

These are a four-character alphabetic code that represents the legal entity company name for a company that manufactures equipment or provides supplies and/or services to the communications industry as per ANSI ATIS-0300220, Representation of the Communications Industry Manufacturers, Suppliers, and Related Service Companies for Information Exchange.

The Common Language Store typically delivers codes via email within two business days after the order is received. There is a one-time fee for creating each code. An additional fee applies if the requesting company requires a change to the code in the future, such as because a merger/acquisition has resulted in new legal entity company name.

## The Common Language Store provides spreadsheets

In addition to individual codes, the Common Language Store offers six code spreadsheets: DRC, EC, IAC, ICSC/SC, MFR and Switching System Codes (SSC). Each spreadsheet provides a current snapshot and is delivered via email within one business day.
